TRAINING

## OUR CVET METHODOLOGY

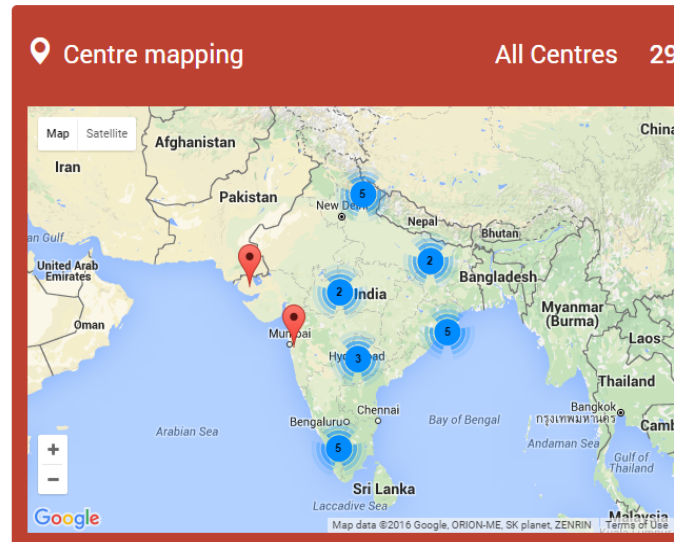

- Technical and non-technical courses
- Available in 8 languages
- Catered towards low-literacy audiences

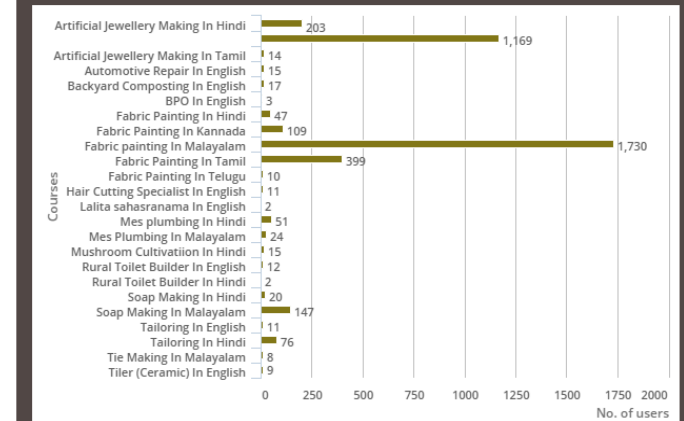

## TRAINING CENTER MANAGEMENT VIA MYSANGHAM

Mysangham SuperAdmin

### Students Enrolled in Courses

## ZONAL LEAD TO FACILITATOR COMMUNICATION VIA WHATSAPP

## REMOTE MONITORING VIA AVIEW

## COMMUNICATING ACHIEVEMENTS VIA FACEBOOK

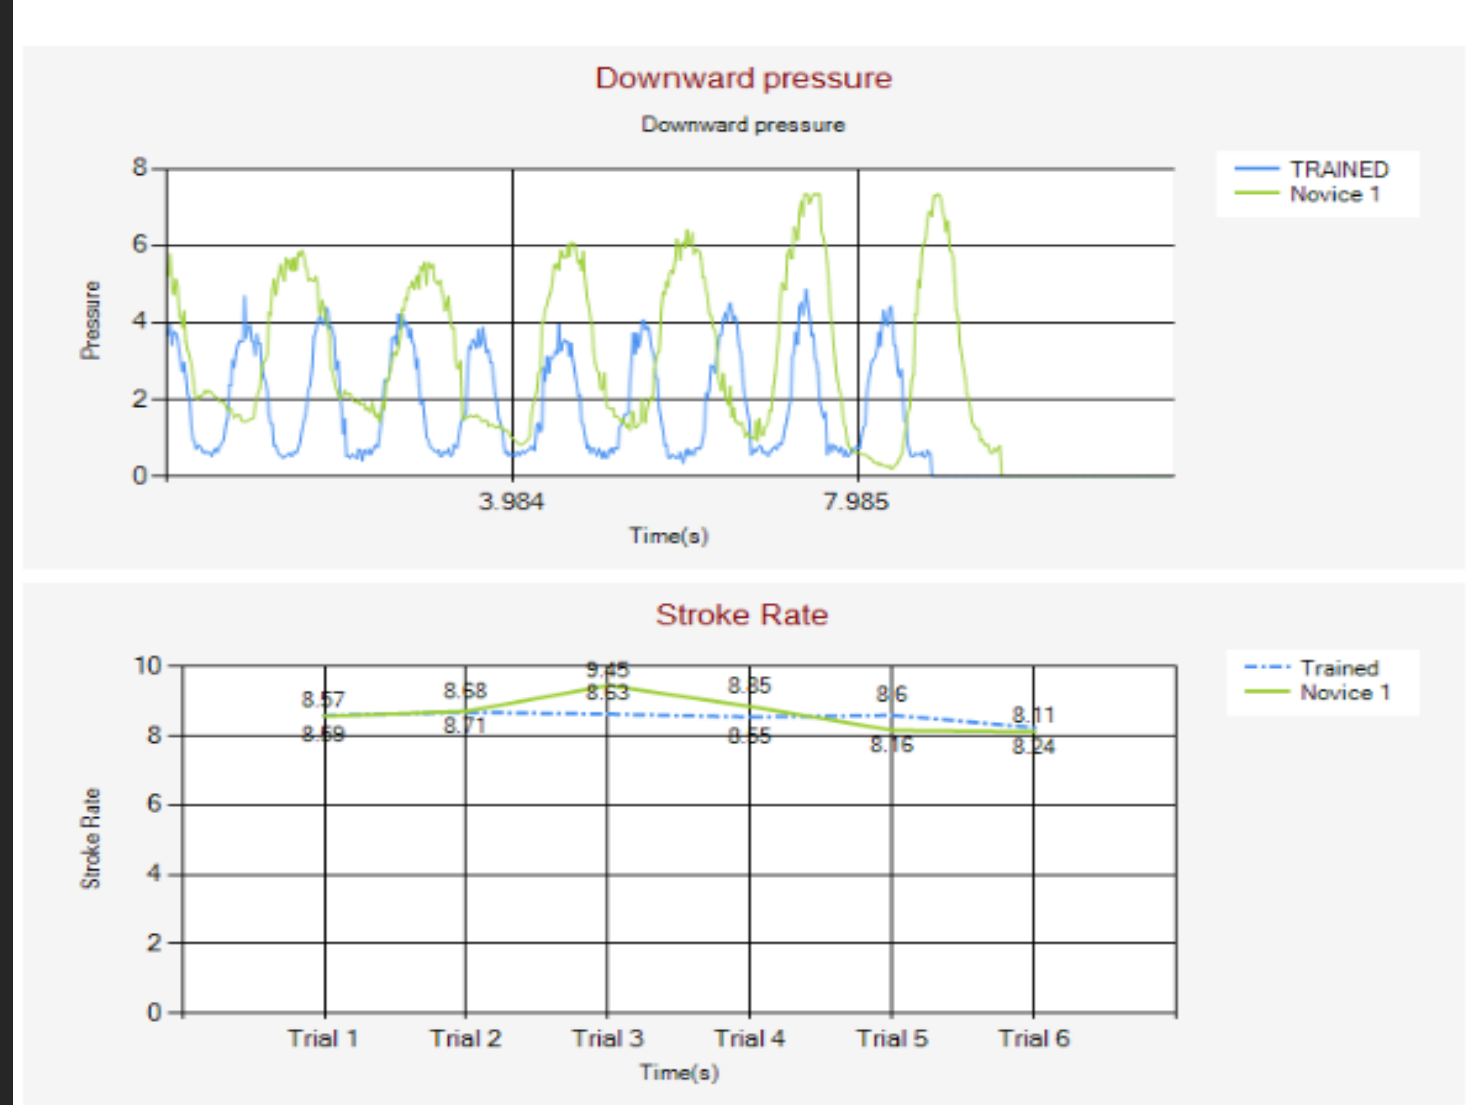

## MONITORING & EVALUATION

## Current

- Skill Metrics Analysis
- Skill Assessment & analysis reports
- Data mining
- Tracking skill improvement
- Performance Prediction
- Performance Modelling
- Customized feedback

Accurate comparison of Expert and Novice performance

WE is a process  
that is  
continuously  
changing ...

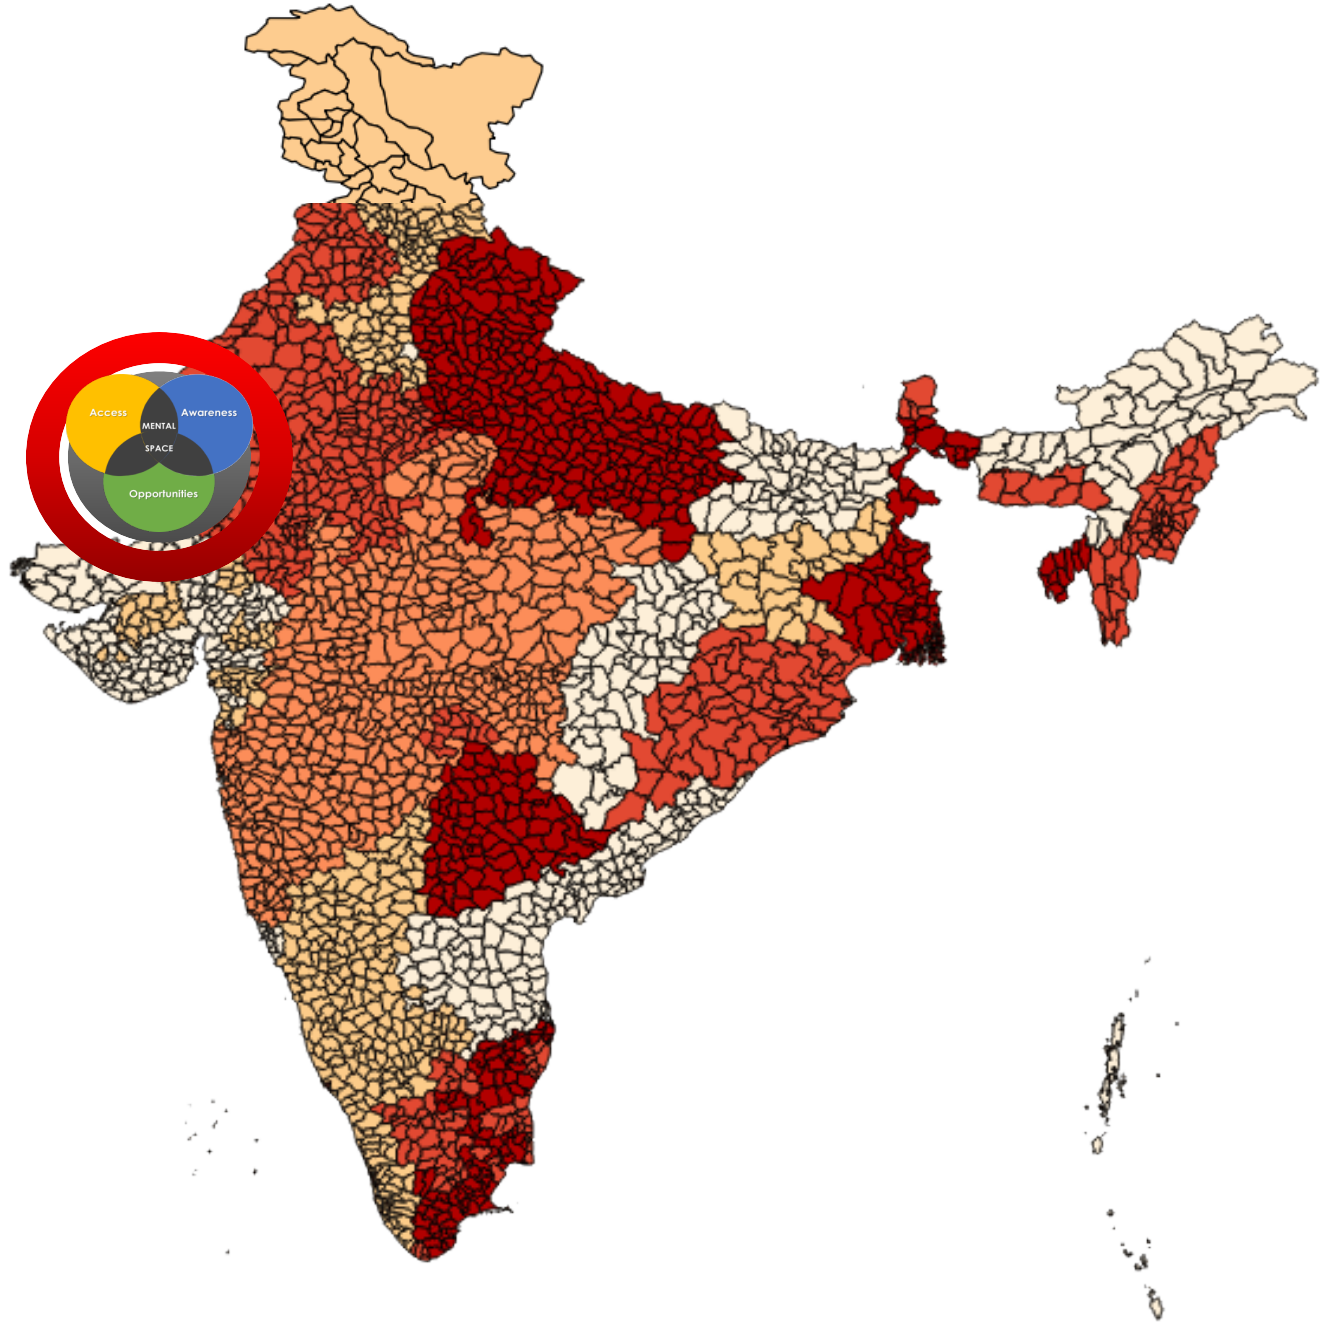

.... over time

WE is a process  
that is  
continuously  
changing ...

.... over geography

WE is a process  
that is  
continuously  
changing ...

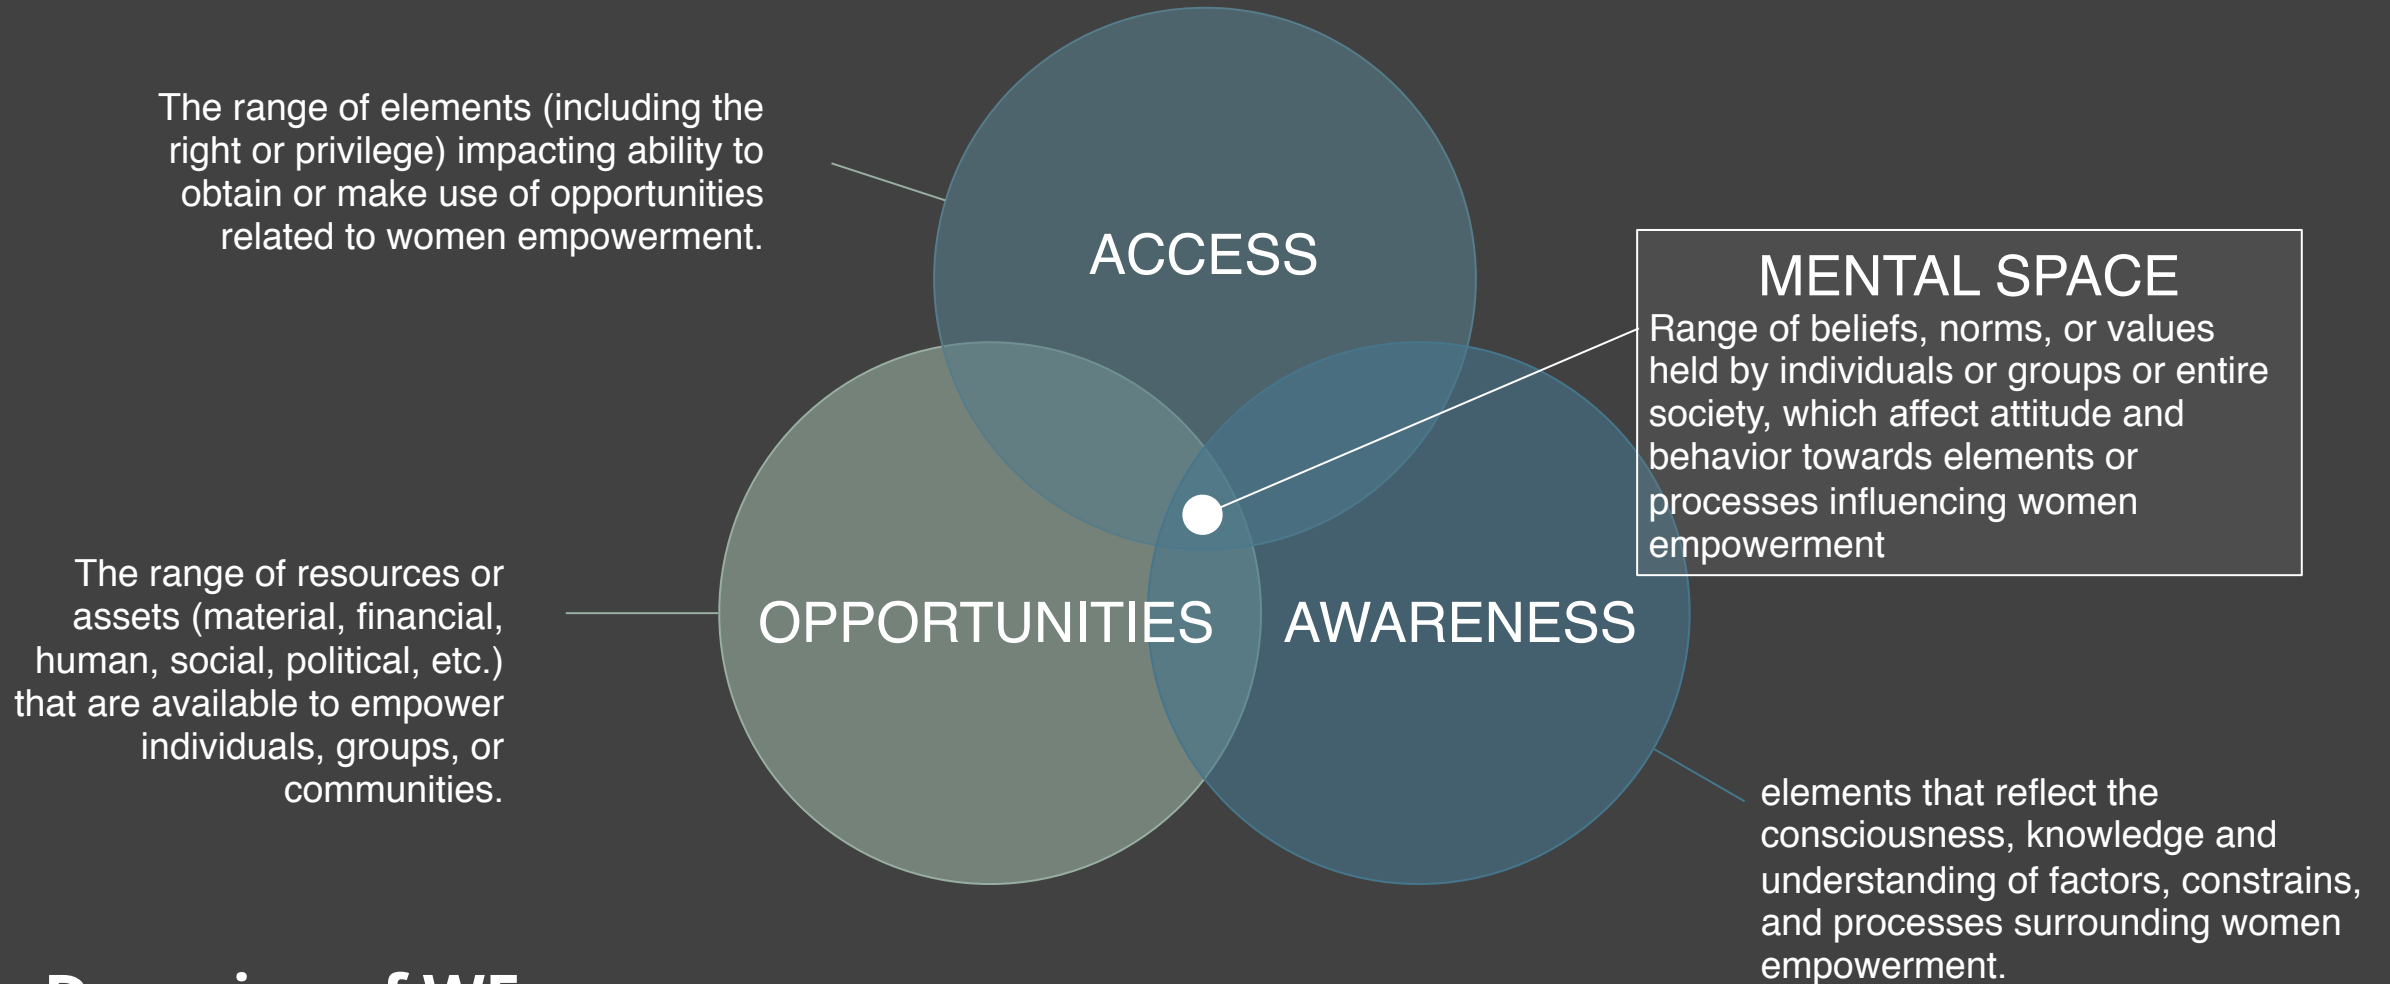

.... and between contexts

# Women's Empowerment

The process of increasing women's choices & capacity to make discerning decisions towards sustainability & resilience

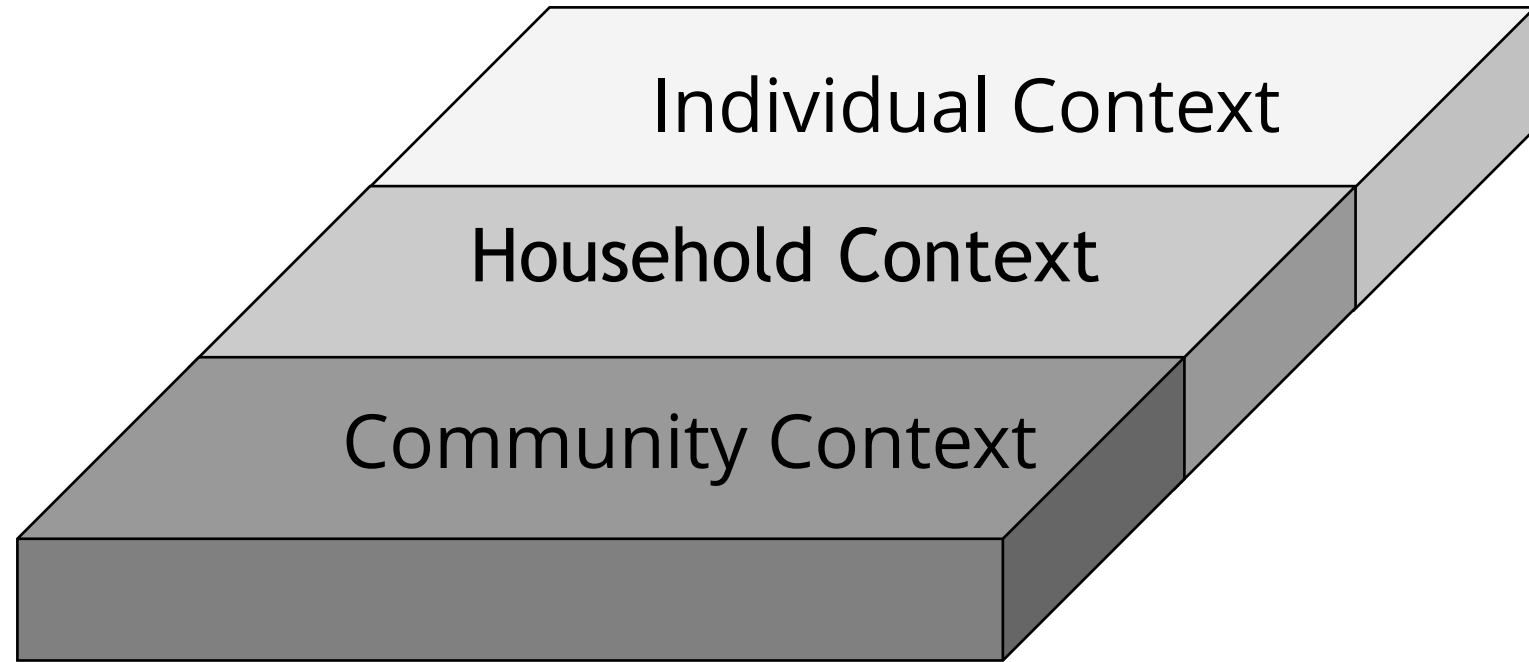

**Domains of WE**

# Contexts of Women Empowerment

The scale or level at which women empowerment is observed or measured.

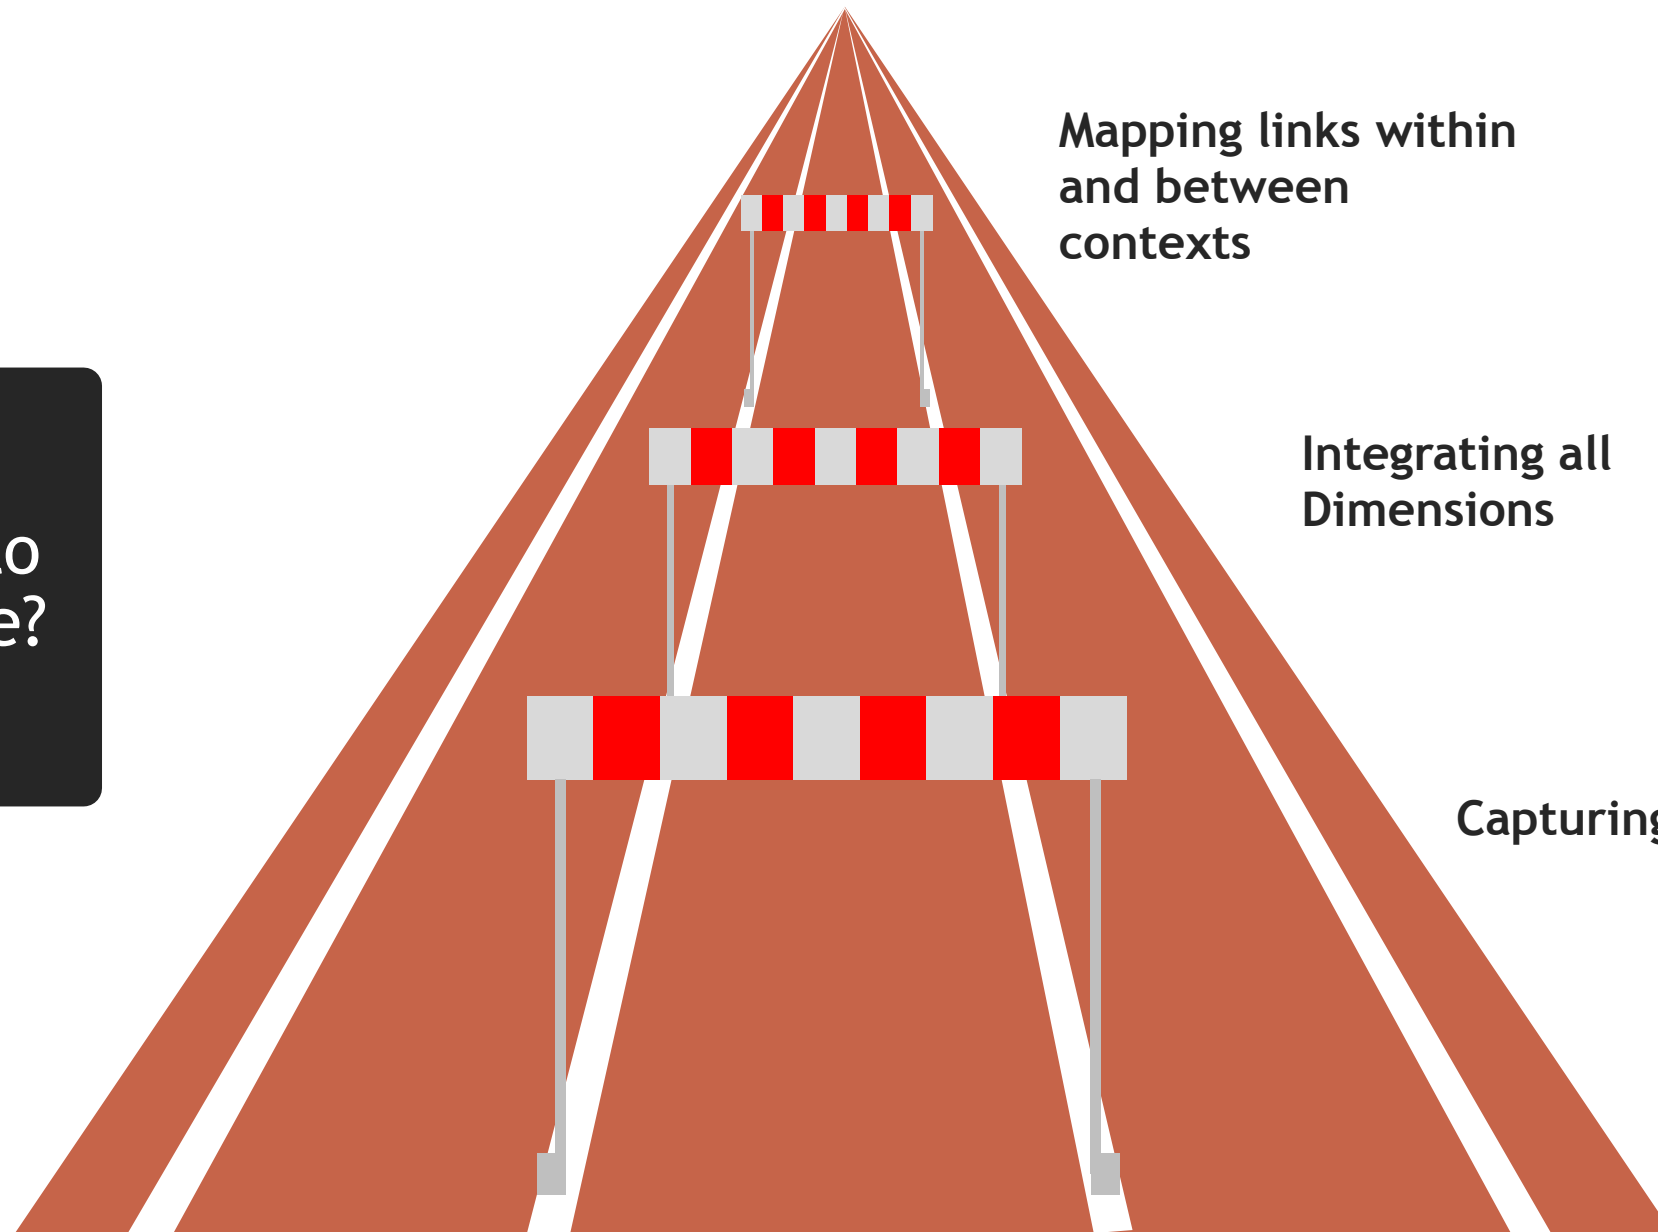

# WOMEN - DIMENSIONS

**Hurdles to  
Overcome?**

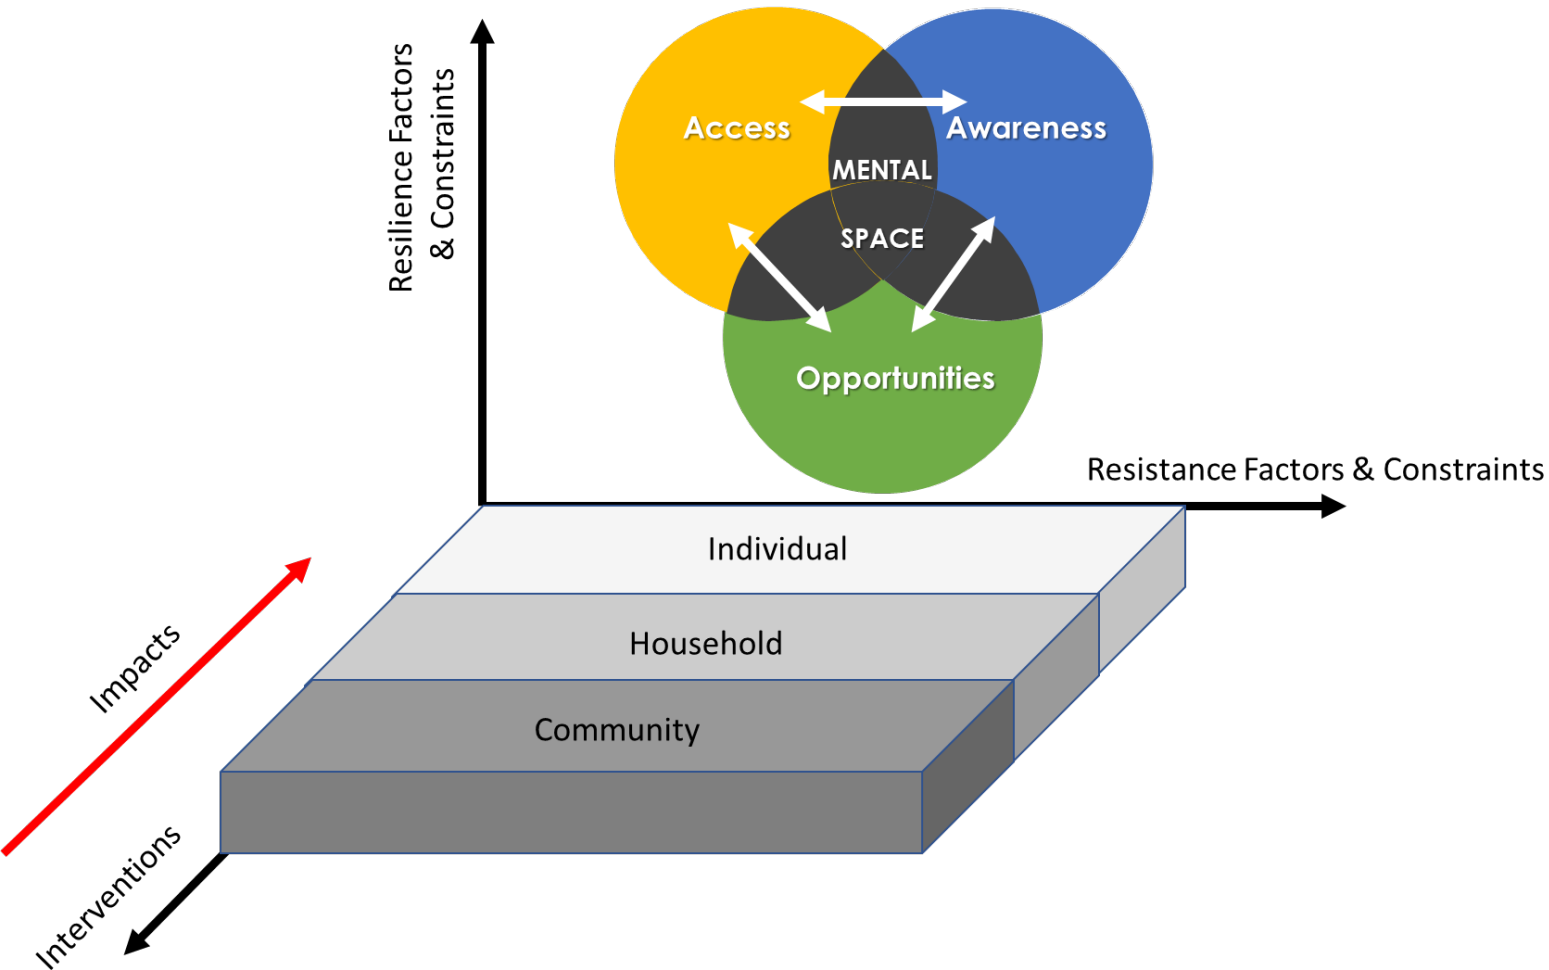

**Mapping links within  
and between  
contexts**

**Integrating all  
Dimensions**

**Capturing all Domains**

# Introducing AWESOME!!

**Resistance:** elements or processes increasing or preventing women's ability to maintain psychological, financial, social, health and welfare balance and to make discerned decisions when faced with external shocks or stressors.

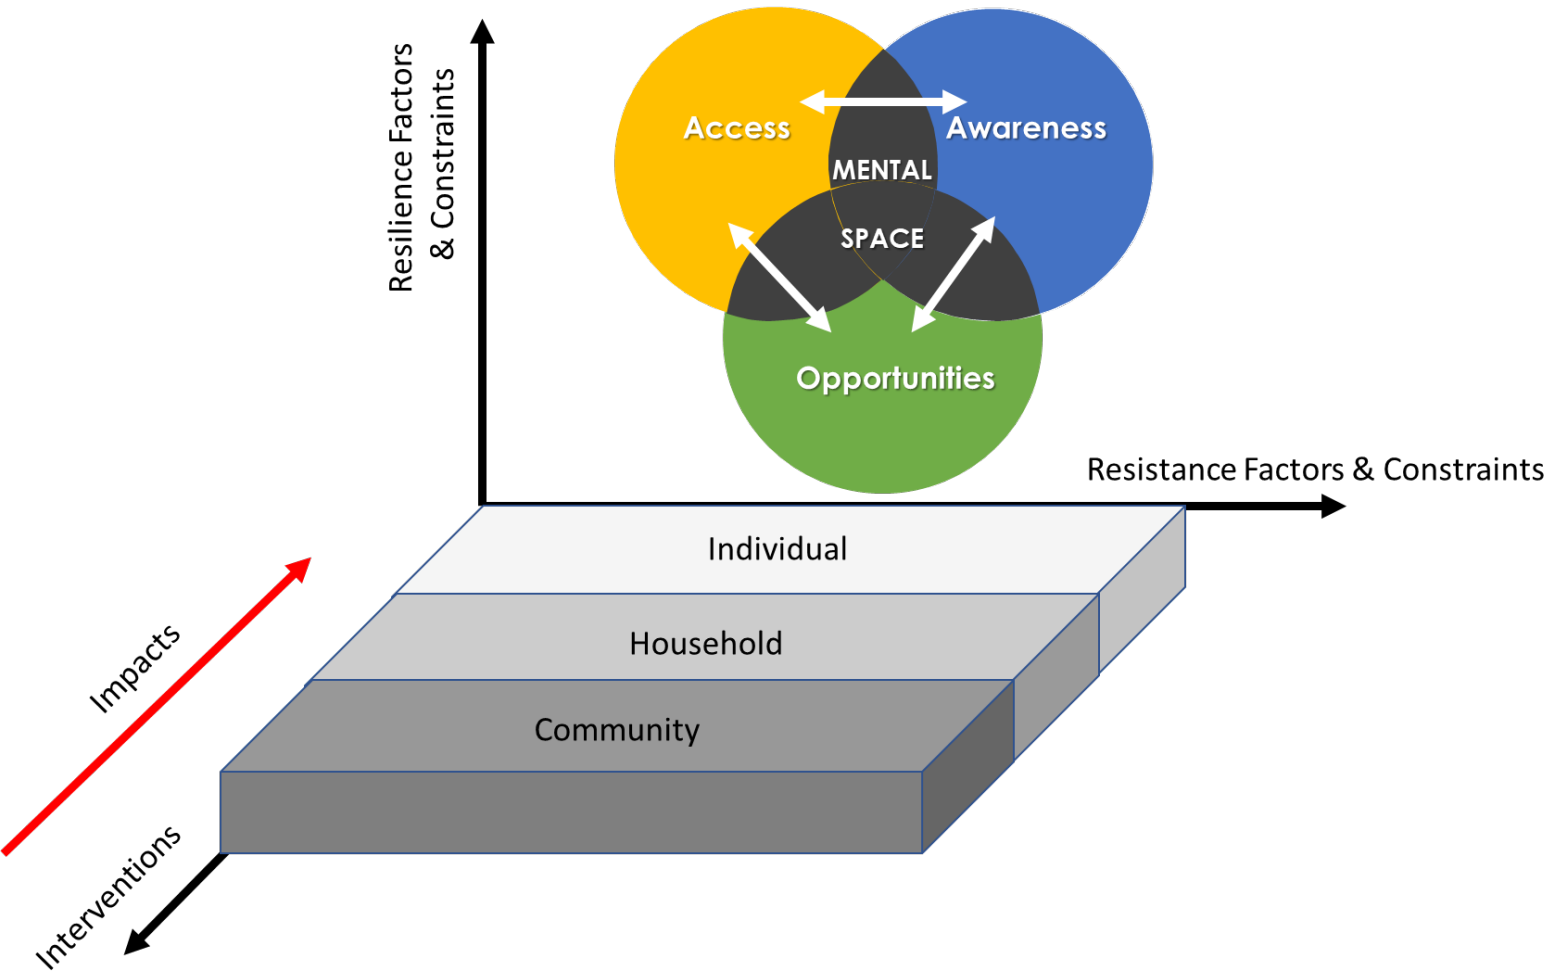

**Resilience:** elements or processes increasing women's speed of recovery from stresses or hard circumstances.

**Intervention:** Element, event, process, and/or action resulting in the change within empowerment domains and their interrelations.

**Impact/Feedback:** A change occurring within and between empowerment domains because of an intervention leading to either increase or decrease on the overall status of women empowerment at a given context(s).

# Introducing AWESOME!!

**Women Vulnerability:** A state of women empowerment at a given point of time, determined as the net product of interactions between **factors, constraints, interventions, and impact feedback** shaping the ability of women's choice and decision-making capacity at the **individual, household and community levels**

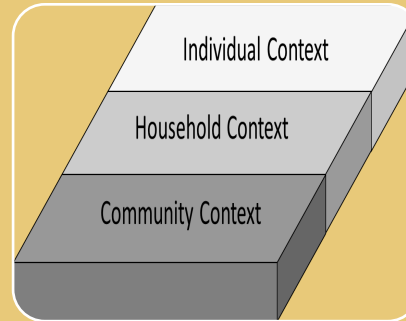

# AWESOME Goals

Provide clear definitions and semantics for WVM and WE related concepts

Define women vulnerability mapping requirements at various contexts, dimensions, and domains

Effectively delineate context relations and interdependence

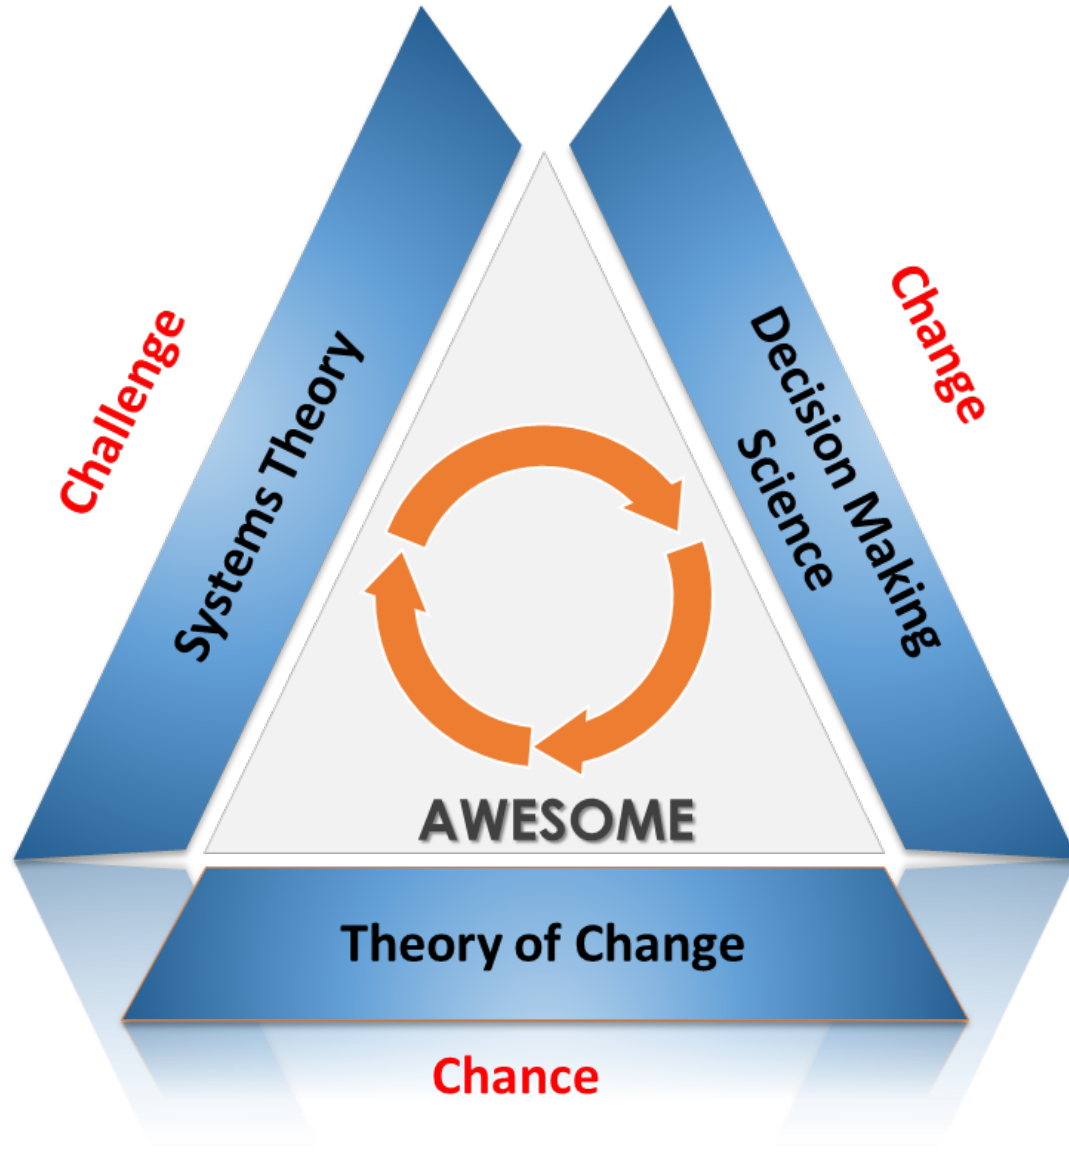

Ability to measure and monitor progress overtime in quantifiable terms

Set a solid foundation to propose interventions and model their impacts in advance over time, context, and geography

## Guiding Theories

# THEORY OF CHANGE

## Theory of Change

- Provides a systemic process to design and achieve desired changes through a “causal pathway” that maps the desired changes backwards to the preconditions (activities, context and outcomes) that need to exist to result in the changes
- Helps achieve a shift from ad hoc reactions to farther-reaching and longer-term solutions
- Changes at various levels:
  - Individual, Collective
  - Top-down, bottom-up

## Participatory Decision Making

- A proactive approach to identify chronic and acute threats and challenges, then deal with them
  - Economic
  - Governance/ Institutional
  - Societal
  - Environmental
- Enforces resilience by increasing the “immunity” of societies either by eliminating risk threats or reducing vulnerability to them.

# Some services using AI

- Lens to look at the community as a whole
  - A relative assessment of women's empowerment across communities
  - What are the indicators of women's empowerment?
  - Indicators and their scores revealing the strengths and weaknesses of a community
- Gain insights on women's problems and its roots in a holistic way
  - What are the factors that empowers women?
  - What constraints the empowerment of women?
  - How does women network (interactions) within their community?
- Focused lens on the individual vulnerabilities
  - How far women is vulnerable to their health issues?
  - Does involvement in community activities make them feel more empowered?
  - Which are the leverage points to bring in a behavioral change towards sanitation?
  - What triggered the improvement in girls education?
- Intelligent tools for data collection, integration and knowledge dissemination

# Whom can be benefited?

1. NGOs
2. Policy Makers
3. Social Workers
4. Government bodies
5. Local administration bodies
6. Researchers
7. Women in a community

# Some Applied domains of AI in WE

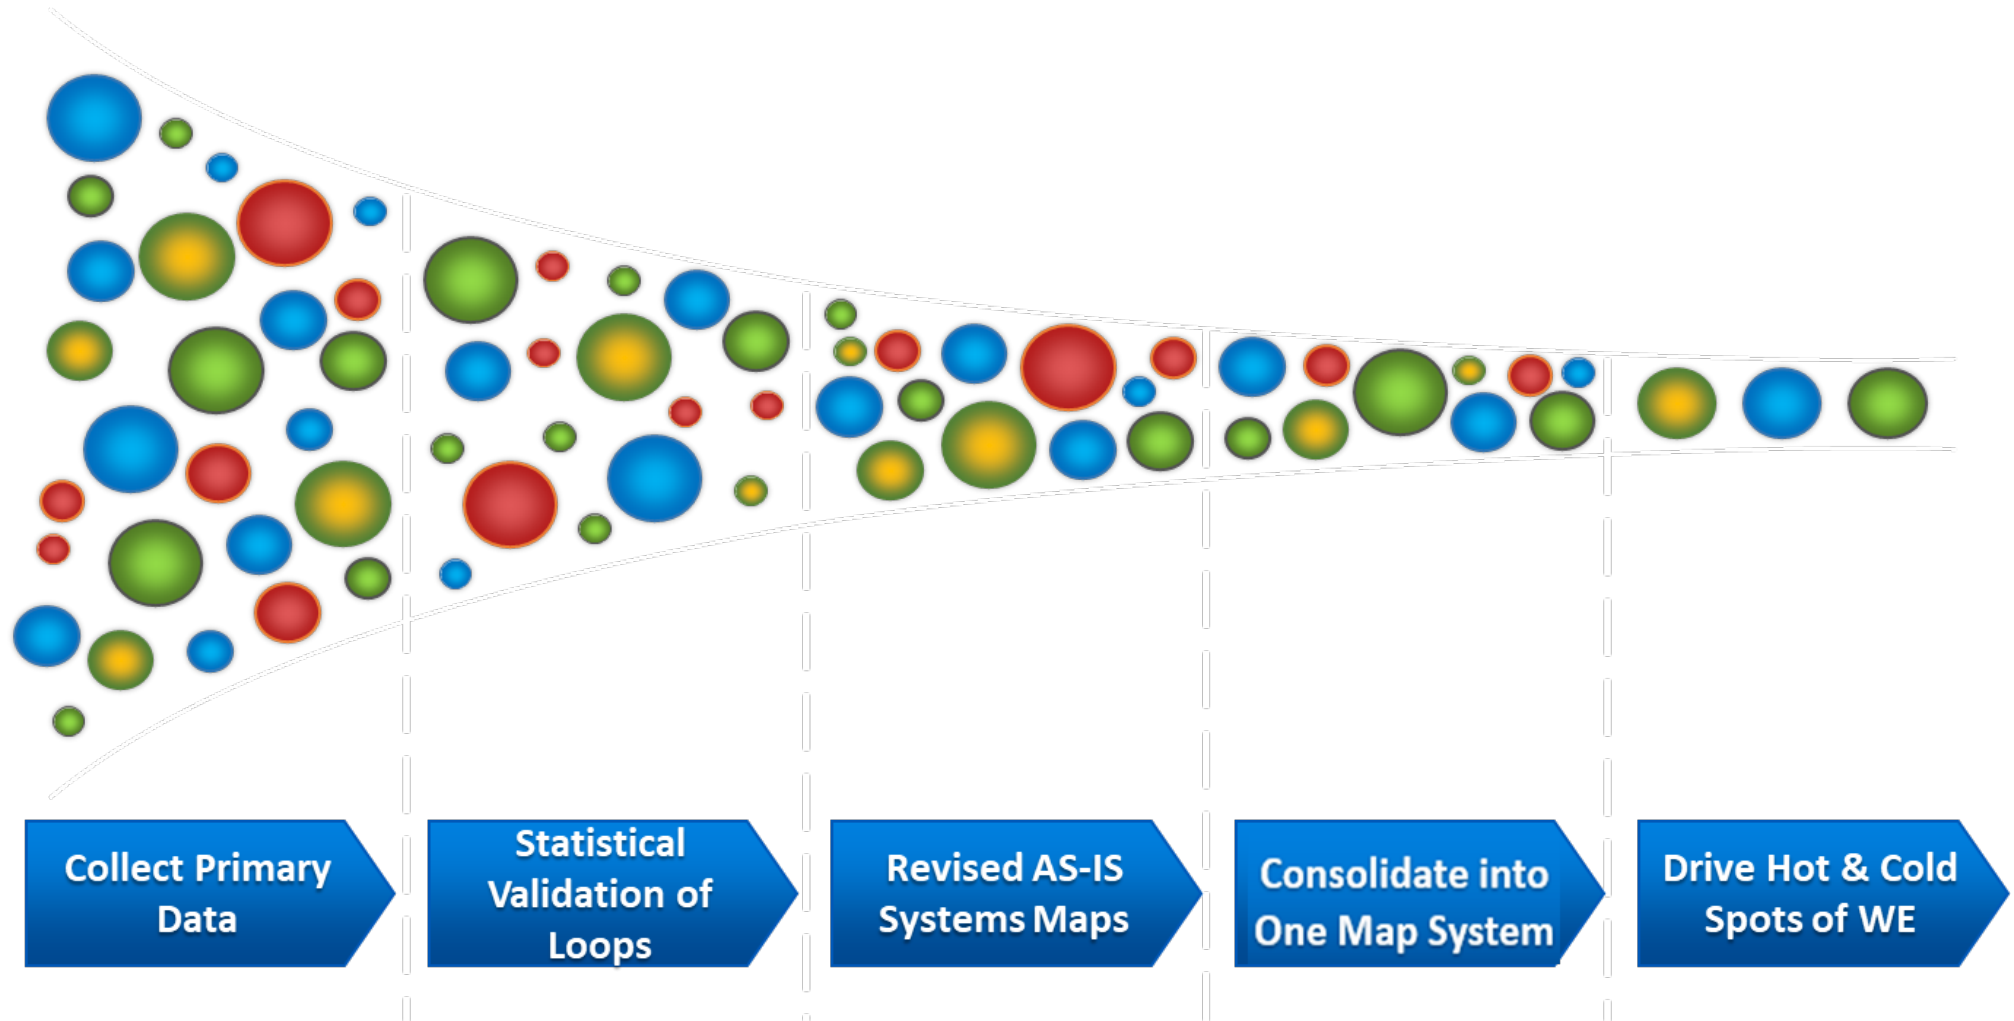

Technical Domain	A scenario from the domain of WE
Spatio - Temporal Analysis	Analyse empowerment across geography and time
Exploratory Experiment Design and Analysis	Determine different factors of empowerment and their interplay
Natural Language Processing	Knowledge extraction from textual data like documents, messages, feedbacks etc.
Fuzzy models	To assess and measure relative concepts like 'empowerment'
Analytical Social Networks	Women in the community as a network where their interactions forms the links
Simulation Modeling and Decision Support	To assess and measure the impact of the implementation of an intervention

## **Case Study - I**

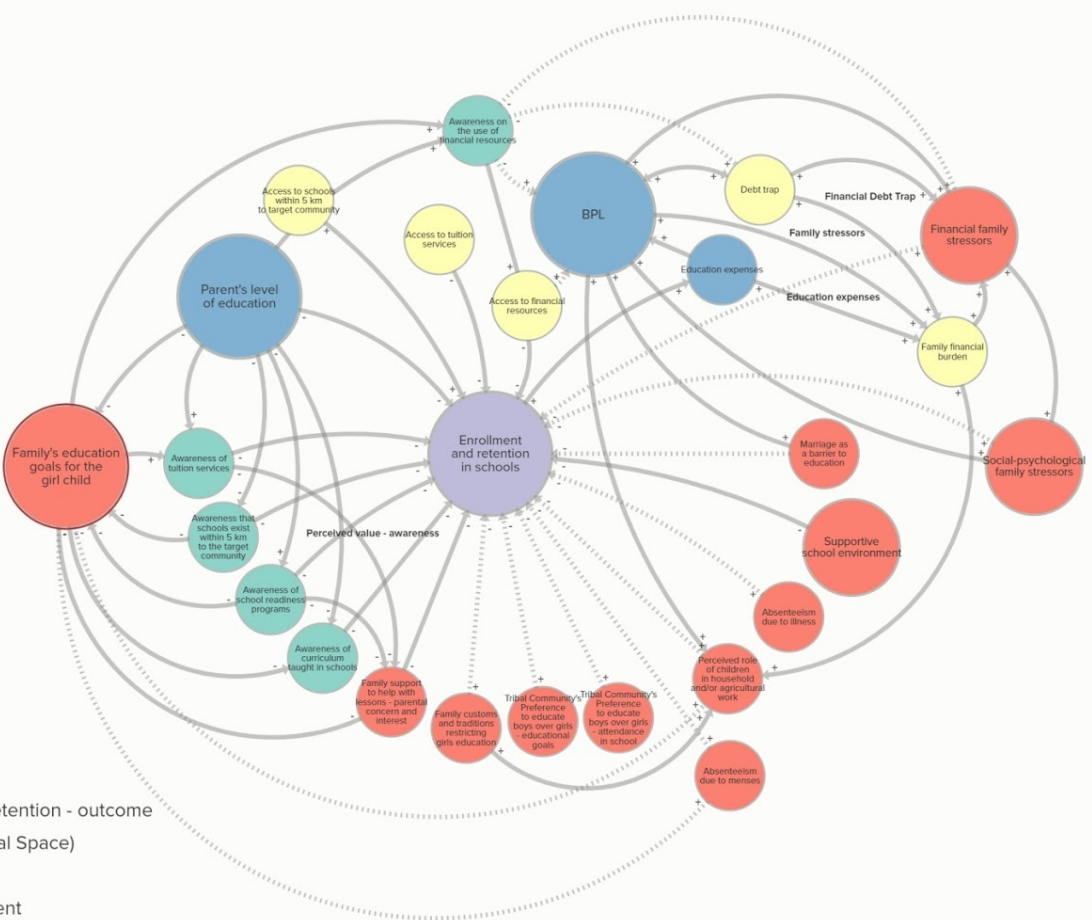

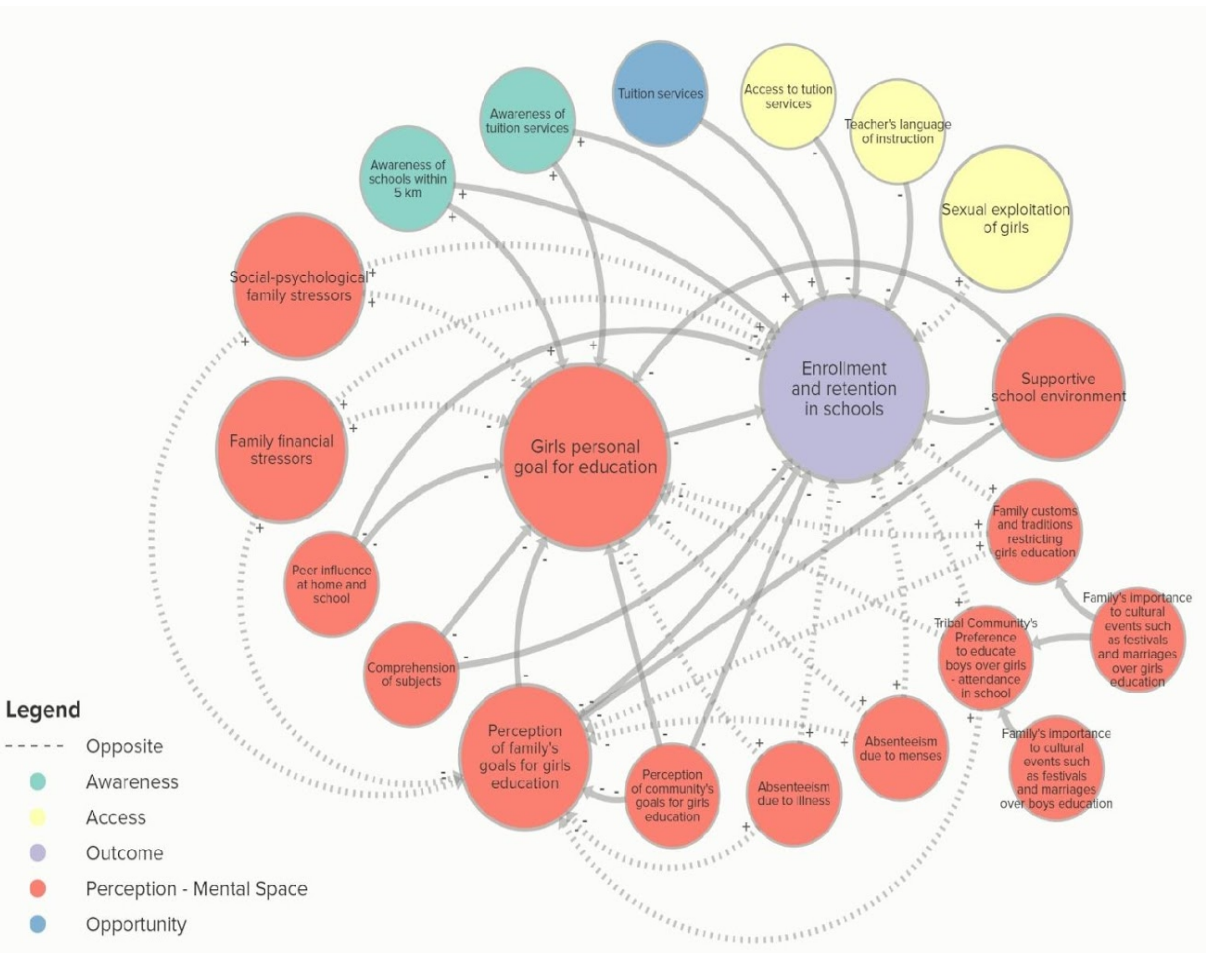

**To Derive dominant factors and constraints for the current state of women empowerment**

**Location: Nellarachal, Wayanad, Kerala**  
**Fieldwork: 94 houses, 10 Colonies**

# Implementation Phases

# The Individual Context: Initial AS-IS map for Education

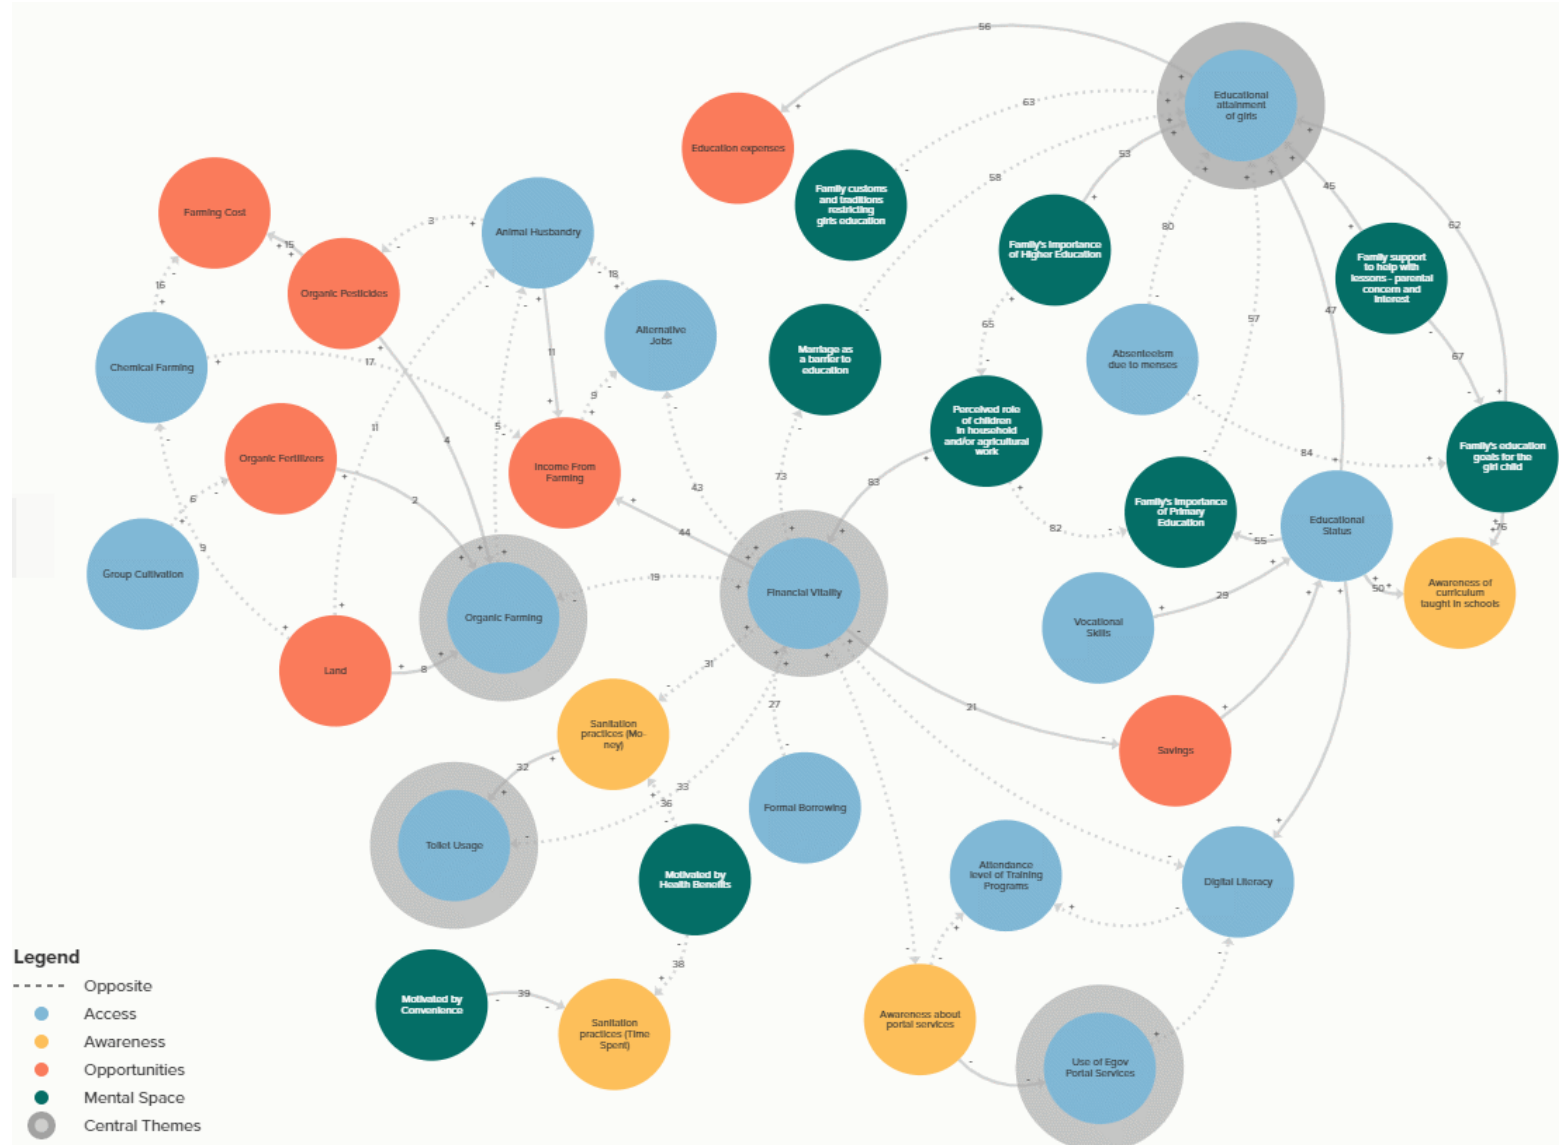

# The Family Context: Initial AS-IS map for Education

# Final integrated AS-IS systems map

## Delineate Hot & Cold Spots of Women Empowerment

**Hot Spot:** Represents elements (individual, household and/or community) that rank lowest in one or more WE dimensions **RELATIVE** to the given context (i.e., a specific village) (that is, the one that should be prioritized for empowerment in a given dimension)

**Cold-Spot:** Represents elements (individual, household and/or community) that rank highest in one or more WE dimensions **RELATIVE** to the given context (i.e., a specific village)

# Delineate Hot & Cold Spots of Women Empowerment

**Hot Spot:** Represents elements (individual, household and/or community) that rank lowest in one or more WE dimensions **RELATIVE** to the given context (i.e., a specific village) (that is, the one that should be prioritized for empowerment in a given dimension)

**Cold-Spot:** Represents elements (individual, household and/or community) that rank highest in one or more WE dimensions **RELATIVE** to the given context (i.e., a specific village)

# Process Steps Ahead

Apply machine learning to hotspots and coldspots to delineate underlying factors contributing to differential WE over space

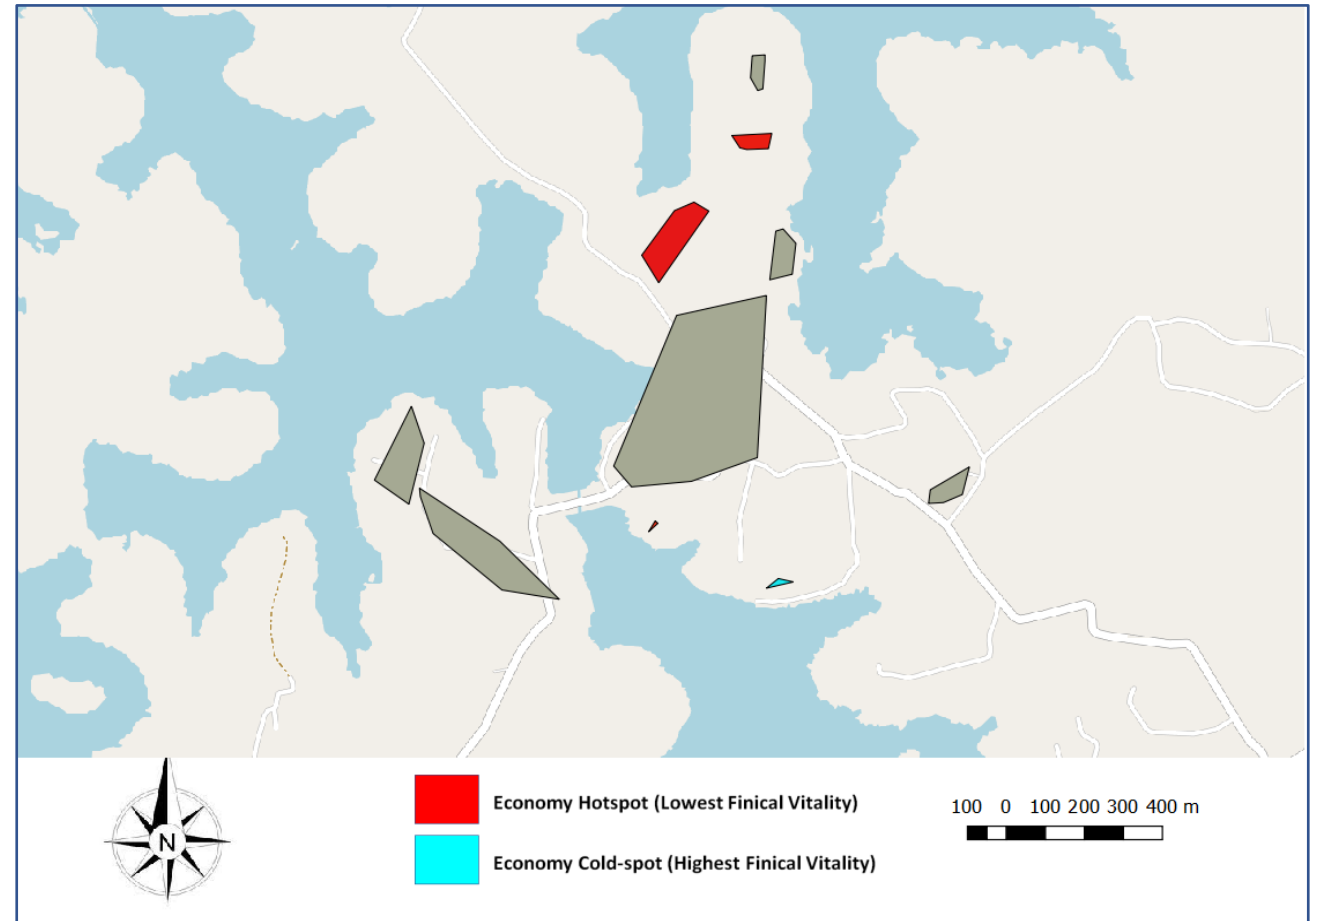

Apply machine learning to determine patterns of and factors contributing to WE state transition overtime

Use derived rules to simulate the impacts of interventions and possible leverage points of Women Empowerment

Identify the best intervention specific to the context of Nellarachal ward

## Process steps ahead

Apply machine learning to hotspots and coldspots to delineate underlying factors contributing to differential WE over space

Apply machine learning to determine patterns of and factors contributing to WE state transition overtime

Use derived rules to simulate the impacts of interventions and possible leverage points of Women Empowerment

Identify the best intervention specific to the context of Nellarachal ward

## **Case Study - II**

**To design and implement software solutions  
for data collection, integration and  
dissemination**

**Project: Vocational Skill Training Programs**

# Tracking and Monitoring Skill Training Programs

## *Name of the Project*

Pradhan Mantri Kaushal Vikas Yojana (PMKVY)

## *Reachability*

# Skill Training Programs - 4  
# Training centers - 10  
# Trainers - 45+  
# Students - 450+

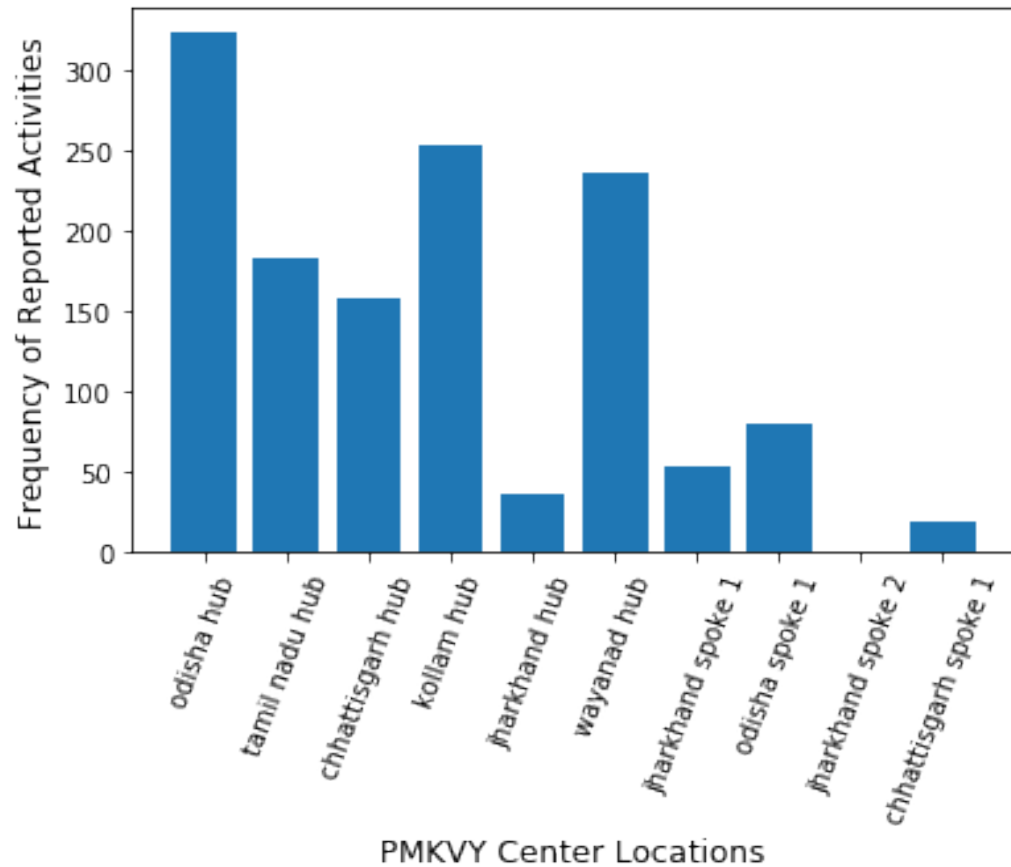

## *Software Package as a solution*

- ❖ Mobile App for Data Collection
- ❖ Web based data portal
- ❖ Cloud based data storage

## *Major Functional Support*

- ❖ Day-to-day activity log
- ❖ Supports different types of activities
  - (Training session, Center administration, Student Registration, Maintenance)
- ❖ Offline & Online support
- ❖ Reports Generation
- ❖ Analysis of feedbacks using NLP

PMKVY Center Locations

Above graph demonstrates the daily updates logged through the software across the centers

- ❖ Odhisha Hub being the first center, reports maximum number of activities.

Given below is the screenshot of the mobile app that facilitates data gathering

- ❖ 2500+ updates
- ❖ Open ended & Closed ended questions
- ❖ Image data
- ❖ Hashtags to support labelling

**Add New Activity**

\*Role  
Facilitator

# Text Processing to check quality of data

## [Application of NLP]

TABLE I: Summary of text data collected across the centers.

Centers	#Activities	#Feedback	#Challenges
odisha hub	323	25	57
tamilnadu hub	184	4	11
chhattisgarh hub	158	6	17
kollam hub	254	7	14
jharkhand hub	36	7	13
wayanad hub	237	42	136
jharkhand spoke 1	54	1	6
odisha spoke 1	81	2	3
jharkhand spoke 2	1	1	0
chhattisgarh spoke 1	19	0	1
<i>Total reported</i>	<i>1307</i>	<i>1198</i>	<i>1203</i>
<i>Total after cleaning</i>	<i>1307</i>	<i>94</i>	<i>258</i>

### *Techniques for Improving Value of Data*

- ❖ Handling mix up of languages
- ❖ Removal of meaningless words
- ❖ Removal of stop words

### *Observations*

Even though 323 activities were reported from Odisha Hub,

- ❖ 25 of them included a meaningful feedback
- ❖ 57 of them reported challenges meaningfully

Lesser activities reported by Wayanad Hub, but they have reported their feedback and challenges much more effectively

## Word Frequency Analysis [Application of NLP]

(a) Word cloud generated for the Feedback given by the users across all the centers

- ❖ The general feedback of the users reflected how the training programs were running in an over all good manner.

(b) Word cloud generated for the challenges reported by the users across all the center

- ❖ Power Failure was one of the main challenge faced
- ❖ High frequency of the word 'one' in the challenges. Indicates a common scenario - One student finding it difficult to follow through the training

# Sentiment Analysis to assess trainer's satisfaction

## [Application of NLP]

- ❖ we applied sentiment analysis on the challenges data provided by the trainers at the training centers
- ❖ “Sentiment analysis is a contextual text mining technique that analyzes and extracts sentiments, peoples opinions, attitudes, emotions that helps to understand their sentiments towards the product, organizations, topics, events and issues”
- ❖ One third of the feedbacks where found positive
